

ISO SHIELD™

3 IN 1 HAND SANITISER, TOUCHPOINT CLEANER & PROTECTANT

iso™
TECHNOLOGIES

SUPERIOR PROTECTION LIKE NO OTHER

- ISOSHIELD™ is a unique and powerful multi-application cleaner, sanitiser and antimicrobial protectant, redefining protection against bacteria and germs with its revolutionary formulation of active ingredients.
- ISOSHIELD™ can be applied to hands and surfaces. On evaporation, a durable bonded antimicrobial coating is produced which has sustained and soundly proven antimicrobial properties.

“ISOSHIELD™ kills 99.99% of harmful germs and bacteria and continues to protect for 28+ days”

Just because surfaces have been cleaned, it doesn't mean they are hygienic. In fact, even though the area looks clean, microscopic organisms and pathogens are still alive and multiplying at an astounding rate. Good hygiene has prevented more disease than every vaccine and antibiotic ever invented, but we have forgotten that lesson.

Use ISOSHIELD™ to ensure ongoing protection from harmful germs and bacteria on hands and daily touch points. Non leaching once it has dried and bonded to the surface, so it is safe for the environment. Ready to use, does not require dilution.

HAND SANITISER, TOUCHPOINT CLEANER AND PROTECTANT

CLEANS

This superior formula effectively cleans away dirt, oils, fats, grease, faeces, blood, germs and bacteria on hands and surfaces without using water.

SANITISES

Kills 99.99% of bacteria and germs and is one of the safest and widest ranging bacteria inhibiting sanitisers available.

PROTECTS

ISOSHIELD™ provides longer lasting protection from germs and bacteria and is PROVEN to protect surfaces for 28+ days.

“ISOSHIELD™ is ‘The worlds best sanitiser’ technically, chemically and physically superior”

GERMS ARE EVERYWHERE!

ISOSHIELD™ is one of the safest and most effective means of protection against germs, bacteria, mould and nasty viruses.

Protect yourself from:

- E.coli
- Pseudomonas Aeruginosa
- Salmonella Menston (food poisoning)
- Staphylococcus Aureus (MRSA)
- Candida Albicans (yeast)
- Aspergillus SPP (black mould)
- Enterococcus Faecalis

And many other bacteria, moulds and viruses.
